DETAILED ACTION

Election/Restriction

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
 - I. Claims 1-17, drawn to a mathematical model, classified in class 434, subclass 188.
 - II. Claims 18-21, drawn to a method of simulating an imaging system, classified in class 434, subclass 267.
 - III.. Claims 22-28, drawn to an apparatus for , classified in class 434, subclass 267.
2. Inventions I and II are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the mathematical model of Group I can be used in methods different from that claimed in Group II, including methods which do not include simulation of projection of rays, collection of rays and calculating ray sums.
3. Inventions II and III are related as process and apparatus for its practice. The inventions are distinct if it can be shown that either: (1) the process as claimed can be practiced by another materially different apparatus or by hand, or (2) the apparatus as claimed can be used to practice another and materially different process. (MPEP § 806.05(e)). In this case the method of Group II can be used to simulate models other than the anatomical models of Group III .

Art Unit: 3712

4. Inventions I and III are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the subcombination of Group I has features including the transformation operators which are not part of the combination as claimed in Group III. The subcombination has separate utility such as use in apparatuses which do not include logics for simulation of projection of rays, collection of rays and calculating ray sums.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

6. Because these inventions are distinct for the reasons given above and the search required for Group I is not required for Group II, and the search required for Group I is not required for Group III, and the search required for Group III is not required for Group II, restriction for examination purposes as indicated is proper.

7. A telephone call was made to Donald Ingraham on January 3, 2003 to request an oral election to the above restriction requirement, but did not result in an election being made.

Art Unit: 3712

8. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

9. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(I).

10. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kurt Fernstrom whose telephone number is (703) 305-0303.
